**Bait Chunks & Underwater**

Chunks are bait that are thrown into the water for fish or wildlife to eat. When chunks are placed in the water, they attract fish and encourage them to gather around and feed. This can be done for various reasons, such as to attract fish for fishing or to provide food for wildlife.

1. **Tilapia Chunks**
   - **Fish Food**: Tilapia chunks are commonly used as fish food. They are small chunks of fish that are thrown into the water to attract fish and encourage them to gather around and feed. This can be done for various reasons, such as to attract fish for fishing or to provide food for wildlife.

2. **Mammal Chunks**
   - **Wildlife Food**: Mammal chunks are also commonly used as wildlife food. They are larger chunks of meat that are thrown into the water to attract wildlife, such as deer or elk, and encourage them to gather around and feed. This can be done for various reasons, such as to attract wildlife for observation or to provide food for wildlife in the area.

Both types of chunks can be used to attract fish and wildlife to a particular area. They can be used to attract fish for fishing, to attract wildlife for observation, or to provide food for wildlife in the area. Chunks can be placed in the water using a variety of methods, such as throwing them into the water by hand or using a投鱼器 (tossing device) to throw them into the water from a distance.
